on predictive medical diagnostics. Our DeepView System uses proprietary AI algorithms to distinguish between fully damaged, partially damaged and healthy human tissue characters invisible to the naked eye, at the initial time point of wound presentation. The DeepView System delivers a binary prediction on the wound's capacity to heal or not-heal by a specified time point in the future. Our DeepView System's output is specifically engineered to assist the health care professional in making a more accurate, timely and informed decision regarding the treatment of the patient's wounds. Our focus is on our burn indication.
